La Crosse Medical Health Science Consortium

Hispanic Culture for Clinical Providers
Special thanks to...

• Gundersen Lutheran
• La Crosse Medical Health Science Consortium (LMHSC)
• LMHSC Cultural Competence Committee

for their assistance in developing this cultural competence module
Disclaimer

• The material in this program is generalized and is not intended to perpetuate stereotypes of diverse individuals or groups of people.

• Cultural traits may vary based on individual preference and level of acculturation – someone may have physical attributes of a specific heritage, but it does not mean he/she practices the traits of that culture.

• Bottom line: Never Assume, Always Ask!
  ▶ Never assume that every member of any culture holds the same beliefs and ideals.

  ▶ Use this background information to ask culturally sensitive, informed questions.
Traditional Medical Practices: Overview

• Health is synergistic
  – Continuum of body, mind, and spirit

• Hispanic health combines:
  – Respect for benefits of mainstream medicine
  – Tradition and traditional healing
  – Strong religion component from daily lives

• Hispanics have a broad definition of health
Traditional Medical Practices: Who Administers Care?

• Traditional medical practitioners include:
  – Curanderas (healers), espiritistas (spiritualists)
  – Hispanic pharmacists suggest both traditional medications & modern prescriptions, in urban areas

• Lay healers (in order of referral):
  – Senora/abuela (older female of community)
  – Yerbero(a) (herbalist), sobador(a) (massage therapist), or partera (midwife)
  – Curandero(a) (lay healer who may use variety of methods)
Interaction 1 of 4

• Hispanics believe that health is a synergy of the body, mind, and spirit.
  – True
  – False
Interaction 1 of 4 (Answer)

• Hispanics believe that health is a synergy of the body, mind, and spirit.
  – True
  – False
Traditional Medical Practices: Treatment/Procedures

• To accomplish balance, hot remedies treat cold illness, and vice versa

• Some common treatments & their uses:
  – Garlic – hypertension, antibiotic, cough syrup
  – Eucalyptus – asthma, bronchitis, T.B.
  – Chamomile – nausea, colic, anxiety
  – Aloe Vera – cuts, burns immune stimulant
  – Bricklebush – adult onset diabetes, gallbladder disease
  – Chaparral – arthritis (poultice), tea for cancer
  – Passion Flower – anxiety, hypertension
Traditional Medical Practices: Pain Management

- Majority of Hispanic cultures are very expressive of pain
  - Includes: crying, moaning, or verbal expression
- Mexican Americans may be much less expressive
  - Pain seen as necessary part of life
  - Crying, moaning could be seen as weakness
  - Stoicism may be preferred
- Women generally have higher tolerance than men
- Numeric pain scale may not be understood
- Hispanics may prefer oral or IV treatments to IM or rectal
- Some patients may have a fear of becoming addicted to pain medication
Traditional Medical Practices: Views on Western Medicine

• Western medicine is usually accepted & respected as part of medical treatment
  – Many Hispanic patients may use a combination of mainstream and traditional methods
  – Always ask the patient if they are using any herbal treatment or remedies
Interaction 2 of 4

• Various herbs are used as remedies for illnesses & regular medical maintenance.
  – True
  – False

Caution on Stereotyping
Various herbs are used as remedies for illnesses & regular medical maintenance.

- True
- False
Biological Variation: Disease Trends

- Top 10 leading causes of death for Hispanics (1998):
  1. Heart Disease
  2. Malignant neoplasms
  3. Accidents and adverse effects
  4. Cerebrovascular diseases
  5. Diabetes Mellitus
  6. Pneumonia & influenza
  7. Homicide & legal intervention
  8. Chronic liver disease & cirrhosis
  9. Chronic obstruction & pulmonary diseases
  10. Certain conditions originating in the perinatal period
Biological Variation: Disease Trends

• Top 2 leading causes of death for Hispanics and non-Hispanic whites are the same:
  – Heart disease & cancer
  – For Hispanics – those two causes account for 45% of all
  – For non-Hispanic whites – those 2 causes account for 55% of all deaths

• Hispanic adults have lowest rate of smoking
  – Hispanic 8th graders have highest rate of smoking among peers
Biological Variation: Life Expectancy

• Hispanics have a pattern of positive health indicators:
  – These include: diet, low levels of smoking & illicit drug use, and strong family structure
  – Unfortunately, acculturation tends to deteriorate these positive traits

• Hispanics have been shown to live longer than non-Hispanic whites
  – Hispanic Women – 82.6 years of age
  – Hispanic Men – 75.1 years of age
• The number one leading cause of death among Hispanics (1998) was:

(Select one)

– Diabetes mellitus
– Heart disease
– Malignant neoplasms

Caution on Stereotyping
Interaction 3 of 4 (Answer)

• The number one leading cause of death among Hispanics (1998) was:

(Select one)

– Diabetes mellitus

– Heart disease

– Malignant neoplasms
Preferred End of Life Care: Death and Dying

• Most Hispanics view death as a natural part of the cycle of life
  – Life is only a temporary loan or gift from God
• Many patients may look to family members for decision making
  – Expect a large number of family members visiting throughout the day and night
• Family may not want patient to be told of terminal illness (always ask head of family if appropriate)
  – The family may think it will effect their ability to live as long as possible
• Female family members are most likely to provide the end of life care; however, males will also be supportive
Preferred End of Life Care: Grief and Loss

• Dying in hospital may not be preferred
  – May prefer to spend final days at home
• Hospice may be looked down upon
  – Could be seen as giving up hope
• Expect spiritual amulets, medallions, and rosary beads
  – Desire for a priest or spiritual leader is common
    • Death is a very important spiritual event
• Organ donation & autopsy commonly viewed negatively for spiritual reasons (always ask)
  – If procedure importance is explained, the family may agree
Preferred End of Life Care: Grief and Loss

- Wailing, loud talking to deities, and contact with the deceased body (hugging, kissing) is possible
- Puerto Ricans may also experience
  - Fainting, nausea, vomiting, or other physical illnesses
  - Reaction is purely psychosomatic, but practitioners should offer sympathy and any necessary care
- For some Hispanic, stoicism is respected, however an expressive grieving process seems more common
- The grieving process in general, is similar to other cultures
• In Hispanic culture, the family is very involved in decision making and end of life care.
  – True
  – False

Caution on Stereotyping
• In Hispanic culture, the family is very involved in decision making and end of life care.
  – True
  – False

- A major problem amongst Hispanic youth is:

- The Hispanic culture views death as:

  Caution on Stereotyping
Question 1 of 5: Identify the correct choice to complete each of the bulleted statements below:  

(Asswers)

• The Hispanic Community has these in several different forms: Traditional healers  

• In general, Hispanics communicate pain expressively.

• A major problem amongst Hispanic youth is smoking.

• The Hispanic culture views death as important and connected with spirituality.

Choices:  

a. Important and connected with spirituality  
b. Traditional Healers  
c. Smoking  
d. Expressively
Question 2 of 5

• Traditional Hispanic healing reinforces the ideas that diseases/medical states are a result of:

(Select one)

– A curse
– Imbalance of hot and cold principles
– Personal infliction

Caution on Stereotyping
Question 2 of 5 (Answer)

• Traditional Hispanic healing reinforces the ideas that diseases/medical states are a result of:

(Select one)

- A curse
- Imbalance of hot and cold principles
- Personal infliction
Question 3 of 5

• In general, Hispanics use Western medicine:
  (Select one)
  – Exclusively
  – Never
  – Along with traditional healing

Caution on Stereotyping
In general, Hispanics use Western medicine:

(Select one)

- Exclusively
- Never
- Along with traditional healing
Question 4 of 5

• The Hispanic population has longer life expectancy than non-Hispanic white populations.
  – True
  – False

Caution on Stereotyping
The Hispanic population has longer life expectancy than non-Hispanic white populations.

- True
- False
Question 5 of 5

• How might a Hispanic family express grief?

(Select all that apply)

– Development of psychosomatic illnesses
– Loud wailing or talking to deities
– Stoicism

Caution on Stereotyping
How might a Hispanic family express grief?

(Select all that apply)

- Development of psychosomatic illnesses
- Loud wailing or talking to deities
- Stoicism
